PROJECT TITLE: Primary Health Care II

PROJECT NUMBER: 669-0219

PROPOSED PROJECT FUNDING (\$000): LOP 10,000

FY 91 3,500 FY 92 2,500

PROPOSED APPROPRIATION ACCOUNT ESF

MAJOR DEVELOPMENT PROBLEMS TO BE ADDRESSED: The major health problems in Liberia to be addressed in the USAID program are high childhood mortality; lack of health and related infrastructure; budgetary limitations and the misallocation of financial resources; limited access to health care services; and a highly centralized and ineffective Ministry of Health and Social Welfare (MH&SW). The FHC II project will combine institutional support and service delivery to address these problems. Targetted interventions (immunization, oral rehydration therapy and malaria control) as well as support for population and family planning programs will be effectively promoted. Management support systems developed and institutionalized under PHC I and policy initiatives undertaken during implementation of PHC I will be consolidated to deal with financial and management problems faced by the MH&SW. final evaluation of the PHC I project conducted in August 1989 indicated that this strategy is valid and that the PHC concepts and framework developed under PHC I are replicable and should be done under PHC II throughout southeastern Liberia.

PROJECT PURPOSE: To increase the proportion of the target population (women and children under 5) with access to an appropriate balance of preventive, promotive and curative services and to improve the quality of health care in the project counties.

PRELIMINARY PROJECT DESCRIPTION: The current seven year Primary Health Care (PHC I) project (669-0165) which ends in June 1990 has demonstrated that primary health care services are an effective way to increase the proportion of the population with access to basic health care. In Liberia, basic health services are available to only 35% of the population. In the PHC I project counties, accessibility is closer to 80% of the population. The PHC I project has established workable administrative, clinical, supervisory and community moblization systems in the two southeastern counties selected for Phase I. Additionally, progress has been made toward program sustainability through cost recovery mechanisms involving fess-for-service and revolving drug funds.

Based on the findings of the final evaluation of the PHC I project conducted in August 1989, the PHC II project will continue current activities in the two counties to consolidate progress made and will replicate the most cost effective Therefore, PHC II combines a elements in four new counties. maintenance with an extension component. The former consists of a continuation and refinement of the primary health care system in the original PHC I counties of Grand Gedeh and Since the project is well underway, the investment here will be minimal. The project will continue to finance local training workshops to upgrade health personnel skills, and short term technical assistance will continue to the Ministry of Health. Long and short-term participant training will be a key component of the project. It is expected that long-term participant training will be comprised of an estimated 32 person-years and short-term participant training about 80 person-months. Total cost of the training component of the project is estimated at \$1.5 million.

In Monrovia, efforts will focus on the Ministry of Health's technical and administrative bureaus and divisions which support the pimary health care program, e.g., Preventive Services, Maternal and Child Health, Planning, Research and Development, Health and Vital Statistics, Central ADministration, Environmental Health and Sanitation, Health Education, and the National Drug Service.

A second component of the project is to increase access to primary health care to an additional four counties, targetted at close to 500,000 beneficiaries, mainly women and children. A carefully phased expansion of the eight management systems, including data collection and financial systems developed for the first two counties will be replicated in four new counties in southeastern Liberia. Access to PHC services will be improved in these counties thorugh upgrading of health titilities, training and deployment of essential health staff, provision of much needed drugs and medical supplies and equipment, commodity support and lng and short-term technical assistance.

A new project focus will be extensive promotion and implementation of family planning services and interventions. Initially, the project will develop reliable baseline data about the client population to be served. The project will also provide for the following: a) supply of contraceptive commodities for use in the revolving drug fund schemes at the hospital, health center and community levels; b) implementation of rural community based distribution (CBD) programs which use field workers and traditional birth attendants (TBAs) as agents for distribution and resupply; c) integration of specific family planning data into the following existing management systems developed under PHC I: supervision, health information system, training, recording and reporting and procurement and distribution of contraceptive supplies.

To support the key service delivery interventions and address implementation problems, this project will undertake selected operations research (OR). Specifically, OR will focus on the major child survival interventions: immunization, ORT, malaria treatment, and family planning. Private sector development, policy dialogue and donor coordination, key elements of the Mission strategy, will also be promoted under this project. To supplement GOL limited resources, USAID will encourage private sector involvement through close coordination and collaboration with concessions and local PVOs working in the proposed project counties. Cost recovery measures for project sustainability will be supported by user fees, including the revolving drug fund (RDF), fee-for-service and the motorcycle revolving fund schemes.

This project will provide an excellent opportunity for policy dialogue in the identification and improvement of inefficient Ministry of Health policies and programs. For example, we will negotiate a shift of health resources from curative to preventive services; ensure greater privatization of health resources; encourage retraining and redeployment of health personnel; and will ensure, through built-in project conditions precedent (CPs), that the GOL allocate adequate foreign exchange to procure essential drugs and medical supplies and equipment. Mechanisms, already in place to ensure that donor-provided PHC resources are coordinated, will be strengthened and institutionalized under this project. objectives will be promoted and implemented in coordination, with the planned 1991 implementation of the Ministry of Health and Social Welfare's 5-year health plan currently being developed with USAID's support.

The total cost of this project is estimated at \$17.6 million. AID contribution is \$10 million while the GOL will provide \$7.6 million (in-kind and cash). AID funds will be used for technical assistance, training and commodity support. The GOL will support local and recurrent costs for project staff and related health workers, essential drugs and medical supplies, construction and renovation of health facilities and staff housing and for other local operating expenses associated with the project.

A.I.D. POLICY AND BUREAU SECTOR ACTION PLAN FACTORS: The project will contribute toward the Mission's goal of reducing infant mortality. It is responsive to special AID and Congressional interests in child survival, vaccinations and diarrheal control programs. The proposed activity is fully consistent with the Agency's Health Sector Strategy Statement. Because this is a child survival project which is targetted mainly at women and children, no special steps need to be taken to ensure the participation of women in the project. Cost recovery measures promoted under this project will be used to meet certain basic recurrent costs (excluding salaries) of the project. Other recurrent costs not covered by user fees will be negotiated for funding in the GOL recurrent budget.

The PHC II PID was approved in October 1989. Authority has been given to the Mission to approve the PP in the field. ECPR issues, including family planning, private sector participation and GOL provision of foreign exchange will be adequately addressed during PP design.

NEW PROJECT NARRATIVE FY 1992 ABS LIBERIA

PROJECT TITLE: Low-Resource Agriculture

PROJECT NUMBER: 669-0222

PROPOSED PROJECT FUNDING (\$000): LOP 6,000

FY 91 2,000 FY 92 2,000

PROPOSED APPROPRIATION ACCOUNTEE ESF

Major development problem to be addressed: Seventy percent of Liberians live in the rural areas. Nearly all of these are involved in farming, with rice the primary crop. At present, domestic rice production, using traditional methods and low technology, is at family subsistence levels and little is produced for the market. Since rice is Liberia's dietary staple and producers supply only a fraction of the urban demand, Liberia suffers an annual rice import requirement of approximately 135,00 metric tons, costing the nation about \$40 million a year in scarce foreign exchange.

While there exist climatic, biological and social factors which limit increases in agricultural production in Liberia, there is clear evidence that small farmers in particular can and will significantly increase their production of rice and other crops if price incentives and market access exist. However, as the producers are largely illiterate and widely dispersed in a nation with poor communications and infrastucture, they have no means to influence or be informed of central decisions on 'policy and investment which effect agriculture. Furthermore, there is evidence that sustainable increases in productivity as well as production might be possible if technology constraints could be addressed from the farmer's perspective.

PROJECT PURPOSE: The pupose of the Low-Resource Agriculture project is to develop a private sector system that will enable farmers to fully participate in the identification and agricultural development.

PRELIMINARY PROJECT DESCRIPTION: The project will support direct participation of farmers in a farming systems approach to agricultural development at several sites. Such activities will compliment research undertaken by the Central Agricultural Research Institute and will focus on the identification of problems at the farm level that can be addressed by the adaptation of production or processing technology. This work may involve PVOs, Peace Corps volunteers, church-related development organizations and others (including government employees working at the local level). Key issues are likely

to include: underutilization of farm labor; diversification of cash crops; protection of the natural resource base for agriculture; and cost-effective, private sector based -- dissemination of successful technologies. Development of this component of the project will benefit from the implementation experience of a 1990-91 pilot activity in low-resource agriculture undertaken by a local NGO under the Mission's PVO/NGO Support project (669-0211).

The project will also enable Liberian universities, PVOs and other groups in the private sector to work together to address constraints faced by rural households. Assistance will be provided to individuals and groups to design and implement specific interventions that both better define the problem and work toward solutions. A further objective of the project will be to strengthen links among concerned and influential individuals and groups in both the public and private sectors (for example, academics, church leaders, and legislators). Such collaboration is necessary to foster the consensus building needed for policy reform and to communicate options and recommendations to policy makers and the general public. Key issues are likely to include: appropriate roles for the public and private sectors in marketing agricultural production; implications of price setting policies for the ruxal areas; and protection of the natural resource base for agriculture.

The project will mobilze and focus existing local expertise, working through established locally based private sector organizations which are linked to farmers. Direct beneficiaries will be the residents of the rural villages involved in the farming systems work. Indirect benefits from this work are expected to reach the 70 percent of all Liberians in the rural private sector. To the extent that policy and investment decisions begin to take the rural producer into consideration, urban rice consumers and an array of agriculture related enterprises also may benefit in the longer term.

EXPECTED OUTPUTS: 1.)A functioning non-governmental organization (NGO) implementing a program to bring about policy changes and 2.) ongoing work at several sites in which farmers will identify technology constraints to agricultural development, and will develop, test and disseminate options to address the constraints identified.

The five-year life of project cost is estimated at \$7,200,000 consisting of long and short-term technical assistance; training/seminars/workshops; studies; and facilities, logistical support and personnel of the cooperating private sector organizations. The project will be implemented under a grant or cooperative agreemnet with an indigenous PVO or NGO. USAID's contribution will be \$6,000,000.

AID POLICY AND BUREAU SECTOR ACTION PLAN FACTORS: The proposed approach is fully consistent with the Agency's agricultural focus on increasing food production and the incomes of the poor majority while maintaining the natural resource base for agriculture. This project will be a key element of the Mission's shift from government-based assistance to private sector (especially PVO/NGO) activities. The approach has a high potential for benefitting women who constitute the majority of Liberia's small farmers. Furthermore, the project will address several of the Africa Bureau's priority technical concerns (e.g., loss of vegetation, soil erosion and loss of soil fertility).

DESIGN SCHEDULE: The project will be developed by a local PVO or NGO in coordination with USAID. Detailed design work will be completed and a final proposal submitted to USAID by the PVO/NGO by June 1991. A grant or cooperative agreement obligating FY 1991 funds will be executed by August 1991.

NEW PROJECT NARRATIVE FY 1992 ABS LIBERIA

PROJECT TITLE: Small Business Development

PROJECT NUMBER: 669-0225

PROPOSED PROJECT FUNDING (\$000): LOP 10,000 FY 92 3,000

PROPOSED APPROPRIATION ACCOUNT: ESF

MAJOR DEVELOPMENT PROBLEMS TO BE ADDRESSED: The Mission completed a six week assessment of the small and medium business sector in 1989. It confirmed that, though the sector has potential to contribute to Liberia's economy, several problems needed to be addressed. A major conclusion of the study was that USAID/Liberia could play an important role in alleviating some of the constraints and it outlined the programmatic options which formed the basis for this project.

Liberia is characterized by high unemployment, with an estimated half of the labor force of Monrovia either under or unemployed. This labor force is growing rapidly (at an estimated annual rate of 3.3% from 1974 to 1984) due to the high population growth rate and the thousands of new graduates from university, colleges, and secondary and vocational schools, many of whom cannot get jobs. Many of these individuals are young and educated at least to the high school level or with technical skills. At present, it is virtually impossible for the provate sector to absorb this large influx; because the skills mix is inappropriate, industry and private businesses have unmet demand for adequately trained technicians and managers.

External forces as well as poor internal policies have adversely affected Liberia's economic situation. As a result, credit is scarce for all sectors of the pusiness community and for small/medium pusinesses, a perceived risky target group, is almost non-existent.

Despite the fact that some liquidity exists in the banking system, most banks are making a profit from foreign exchange arbitrage and short-term, high interest lending to established business enterprises. Therefore, they do not mobilize deposits for lending. While existing small credit programs, supported by A.I.D., are currently getting repayment rates of 80%-90% overall, the repayment history at all levels of business remains poor. Finally, guarantee schemes by the Government have failed to stimulate a flow of credit to this sector, and the lack of enforcement of credit laws has hindered the effective collection of overdue debts.

In addition to the problems mentioned above, the key constraints to growth of the small and medium enterprise sector includes training and organization. In order to expand, this sector requires financial and business management skills training, assistance in technology development and enterprise development activities, such as proposal writing and entrepreneurship training. Existing trade and business associations have potential to provide assistance to their client groups in these areas but much needs to be done to strengthen these organizations.

PROJECT PURPOSE: The purpose of the Small/Medium Business Development Project is: (1) to develop a trained cadre of entrepreneurs, (2) expand the number and productivity of small/medium enterprises, and (3) develop the institutional base for small/medium business development through manufacturing, trade, and business associations to provide necessary services and facilitate policy dialogue with the Government.

PRELIMINARY PROJECT DESCRIPTION: Under the project, A.I.D. will provide support for training by private PVO/NGO type organizations, including technical training institutions, PVO organizations, and business and trade associations. Funding will be provided to local vocational/training schools, such as the Don Bosco Polytechnic and Liberia Opportunities Industrialization Center (LOIC), which are involved in producing skilled and semi-skilled technicians for existing industries and self-employment. The training provided by these institutions will be expanded to include business/financial management skills, appropriate production techniques, and self-employment skills. The project will also work through trade and manufacturing associations to upgrade technical skills training through formal and non-formal methods.

One critical input to the success of these small businesses is the lack of adequate credit, both in terms of working capital and longer term investment credit. Under the project, A.I.D. will channel seed capital through the vocational schools, trade and manufacturing associations, and existing small-scale credit organizations. Types of credit to be provided will include funds for investment working capital and perhaps support for leasing/purchasing arrangements.

One of the key components in the Project is strengthening the existing trade, business and manufacturing associations to provide services and identify ways to deal with GOL imposed constraints. Existing groups, in such areas as metalworking, tailoring, and transport have proven successful in (1) helping mitigate GOL taxes and fees, (2) marketing of products, and (3) provision of services. The Project will strengthen these existing organizations as well as develop associations in such areas as agricultural processing, labor intensive manufacturing and export businesses.

RELATIONSHIP TO OTHER A.I.D. PROJECTS: The Project will relate to the existing PVO/NGO Support Project, which has provided a grant to expand an existing rural credit organization, the Partnership for Productivity/Liberia, into two new key productive counties, Bong and Lofa.

A.I.D. POLICY FACTORS: This project is fully consistent with USAID/Liberia's strategy which focuses on a greater reliance on the private sector to achieve growth. The recent small and medium business sector assessment concludes that this sector possesses a high potential for employemnt generation, is less adversely affected by the declining economic situation and plays a major role in providing goods and services to the country.

DESIGN SCHEDULE: The Mission will prepare a PID in April-May 1991. It is expected that the Mission will also conduct one or two additional studies to examine agroprocessing and export-related small business opportunities. The PP will be prepared in September-October 1991, with obligation of funds expected in March 1992.

4119A

NEW PROJECT NARRATIVE FY 1992 ABS LIBERIA

PROJECT TITLE: Private Sector Family Planning

PROJECT NUMBER: 669-0227

PROPOSED PROJECT FUNDING (\$000): LOP 5,000 FY 92 2,000

PROPOSED APPROPRIATION ACCOUNT: ESF

MAJOR DEVELOPMENT PROBLEMS TO BE ADDRESSED: The major development problem to be adddressed by this project is rapid population growth due to high fertility, high infant and childhood mortality and low contraceptive prevalence. Rapid population growth hinders development efforts in health, education, agriculture/food production and energy supplies among others, because it outstrips the government's ability to absorb additional people into the economy. To address this problem, contraceptive prevalence . Leds to be expanded through a nationwide program which has as its main thrust increased service delivery and IEC programs under consolidated management.

The Population of Liberia is characterized by high fertility and moderately declining mortality. The net result of these demographic force is a high rate of growth (3.4 percent per annum) and a young population. Of particular concern is high infant and childhood morpidity and mortality levels; the former at a staggering 200 per 1000 live births.

The main obstacles to the expansion of family planning service delivery nationwide are:

- unfavourable attitude towards family planning especially among males
- prevalence of myths and misconceptions about FP
- inadequate knowledge about sexually transmitted diseases 'TTD', reproductive health, adolescent sexuality, teenage pregnancies and abortion. These problems were also indentified by the Liberian Demographic and Health Survey (LDHS), conducted in 1986. The LDHS revealed that knowledge of family planning methods is high (over 70 percent), however, usage is low (8 percent). With this apparent discrepancy between high knowledge content and low usage coupled with a desired family size of even and total fertility rate of seven; a massive FP/MCH IEC campaign is needed to correlate knowledge and usage through the provision of reliable information and education on FP/MCH which would change peoples's attitudes and behaviour towards FP and ideal family size. The net result would be an increase in contraceptive prevalence and a drastic reduction in total fertility. Consequently, the overall growth rate which poses problems for Liberia's development efforts will decline.

PROJECT PURPOSE: The purpose of the Private Sector Family Planning project is to expand family planning service delivery and IEC throughout Liberia primarily utilizing the community-based distribution approach, inorder to increase Liberia's contaceptive prevalence from eight percent to not less than 33 percent, and eventually reduce the national population growth rate.

PRELIMINARY PROJECT DESCRIPTION: This project will enable private sector organizations to expand family planning services to large population centers throughout Liberia.

The expansion will facilitate a significant increase in contraceptive prevalence through family planning service delivery and FP/MCH IEC. FP services will be delivered through the community-based volunteers; while the FP/MCH IEC component will be channeled through a mass-media campaign and buttressed by the CBD field workers.

Specifically, the following statements of objectives (to be further developed during the PID and PP design) will form the basis for the project development emphasis. The objectives of the project are to:

- 1. Provide contraceptive supplies to target clinics and rural communities in counties that have the management infrastructure required for distribution.
- 2. Introduce contraceptives into the essential drugs list and supplies that are included in the revolving drug fund schemes at the county and community levels.
- 3. Decrease the rate of unplanned pregnancy and intentional abortion among adolescents.
- 4. Increase the demand for contraceptive services using mass media in local dialects targeted for rural women particularly adclescents and women with three living children. Messages for men will also be emphasized.
- 5. Expand the distribution of contraceptives to urban populations through the community-based service delivery and social marketing.

Program beneficiaries will be males and females in the reproductive ages residing in major cities and large rural towns. Over the long run the target population will realize the health and economic benefits from child spacing and small family size. At the end of this project, it is expected that contraceptive prevalence will increase from eight to 33 percent.

Proposed implementing organizations are the Family Planning Association of Liberia (FPAL) in collaboration with the Christian Health Association of Liberia (CHAL) and the Liberia Rural Communications Network (LRCN) which was established with USAID/L support. It is planned to use the sub-grant mechanism, successfully being used by CHAL and the Mission's PVO project, to provide funding and support to target beneficiaries.

A key element of the Mission's development strategy is the promotion of family planning services in an effort to assist the GOL to control and reduce the population growth rate. Population control and family planning are also key factors of the GOL population policy. Other donors, mainly UNICEF, UNFPA and WHO strongly support the GOL population/family planning program. Therefore, this project is consistent with the Mission's health/pop strategy as well as the FP/POP programs being promoted by the GOL and other donors (UNFPA, UNICEF, WHO).

A.I.D. POLICY AND BUREAU SECTOR ACTION PLAN FACTORS: Between 1986 and 1988, USAID/Liberia supported family planning projects primarily in urban areas. Policy considerations and national demand for FP services necessitated a revision of our strategy which now supports an expansion of family planning (FP) service delivery and FP information, education and communication throughout Liberia.

This policy objective is consistent with AID/W emphasis on child survival, including extensive promotiion of family distribution of contraceptives. In addition to support expected from CHAL and FPAL, social marketing strategies and the revolving drug fund sheems will be employed to help recover project recurrent costs.

DESIGN SCHEDULE: The project will be developed by USAID/L and REDSO/WCA. PID approval in the field is requested. The pelow schedule is proposed:

- Family Planning Sector Assessment (FP/POP Feasibility Sludy): February 1990 (Completed)
- PID design and approval: April 1991
- PP design and approval: November 1991

4119A

LOCAL CURRENCY USE PLAN

Local currencies have been generated through a Commodity Import Program (CIP) funded from ESF in FY 1988 and since 1988 from PL 480 Title II (Sec. 206) programs. The U.S. \$5.0 million CIP program implemented in FY 1988 and FY 1989 generated approximately \$4.8 million in local currency. This amount has been jointly programmed with the GOL and will be disbursed in in FY 1990 and FY 1991. The FY 1989 \$10.0 million PL 480 Title II program generated approximately L\$15.0 million which has been programmed for disbursement in FYs 1990 and 1991 together with L\$ 2.9 million undisbursed from prior year PL 480 programs.

In the programming of local currency priority is given to activities which:

- 1. Support those core efforts in the health, education and agriculture sectors which have been and continue to be the cornerstone of USAID's development assistance interests in Liberia;
- 2. Assist PVO and NGO activities which have demonstrated the capacity to provide development assistance and services in a competent and effecient manner;
- 3. Suport development mechanisms which provide financial support to viable private enterprises, including agribusiness activities; and
- 4. Support selected GOL directed developmental activities which are consistent with AID strategic objectives.

1992 ABS PRIVATIZATION PLAN

Background/GOL Policy

In 1980, the GOL took possession of hotels, a zoo, animal feed mills, poultry farms, the country's only passenger rail wagon, a paint factory, fleets of fishing boats, and dozens of other industries that had been owned by the Americo-Liberian elite. The government's efforts to manage these companies were unsuccessful. The present government realized that state control of individual firms led to the evaporation rather than the redistribution of profits, and in 1984 the former owners were invited to pick up the pieces. With one partial exception, the Mesurado Industrial Complex, which was owned by the Tolbert family, all of the assets that were taken over in 1980 have been returned to the private sector or closed.

There remain, however, several major companies, most of which began operations before 1980, that are GOL controlled. Some of the most important of these are:

- 1. Liberian Produce Marketing Corporation (LPRC), founded in 1962, and responsible for the purchase and export of coffee and cocoa, and the purchase and import of rice;
- 2. Liberian Petroleum Refinery Corporation (LPRC), nationalized in 1978, and responsible for the processing of most petroleum products.
- 3. Liberian Sugar Corporation, opened in 1977 and closed in 1981, a sugar refinery;
- 4. Decoris Oil Palm Company, incorporated in 1979 but never really productive;
- 5. Butaw Oil Palm corporation, completed in 1984, and working below capacity with EEC assistance;
- 6. Agricultural and Cooperative Development Bank; and
- 7. National Housing and Savings Bank, both incorporated before 1980.

Mesurado, which was worth millions of dollars, includes a machine shop, an oxygen/acetylene plant, a feed mill, an egg farm, and a finshing fleet. Some of these activities have been returned to the Tolbert family, some are now mixed companies, and others remain in GOL hands.

4. -2-

There are also five major public utility companies, as follows:

- 1. National Port Authority, which is now under EEC-funded private management;
- 2. Liberia Telecommunicatio, ns Corporation;
- 3. Liberia Water and Sewer Corporation, now supported by GTZ-funded technical assistance;
- 4. Liberia Electricity Corporation;
- 5. Roberts International Airport.

The government-run companies are overstaffed, inefficient, and ineffectual. The electricity goes off frequently, a phone call is often a time-consuming and frustrating ordeal, Monrovia's central residential area has water only at night, farmers are paid 25 percent of the porder price for export crops, the sugar refinery has not functioned for seven years, the GOL banks cannot cash checks larger than a few thousand dollars without several weeks' notice, and there are gas shortages at least once a month.

The GOL recognizes that a problem exists and stated officially, in Executive Order Number 1/1989 (of February 28, 1989), that "Government is doing everything to privatize public corporations." Despite this statement, which is the latest in a series dating back several years, the GOL has failed to demonstrate that the political will exists to undertake the privatization of a major parastatal.

USAID/Liberia Privatization Strategy

USAID's strategy has been to encourage the GOL to meet its own objectives, starting with a case that is not controversial, and later, if possible, extending our efforts to include support for the privatization of a major public utility. Our first step was a study of the Liberian Sugar Corporation, completed in February 1989, which showed that the company could be profitable in private hands. This study was reviewed and approved by the President's Office in May 1989 and the Ministry of Agriculture has requested USAID's assistance to prepare and review an international tender to sell the refinery. USAID had planned to use FY 1990 PD&S to draw on PRE resources to assist in this effort. The Mission now proposes to use FY 1991 PD&S funding.

In the longer term, USAID will address the issue of whether one of the major public utilities can be privatized. Which parastatal is selected depends on several factors: prior study,

the GOL's proves it is supportive, the attractiveness to private investors, and the potential for improved service under private ownership. USAID may set aside funds in 1991 to conduct a study of the selected parastatal with a view to privatization. If initial studies are promising and the GOL agrees, then USAID may make available same funds to facilitate the process. Our assistance could take the form of using PL480-generated local currency for staff reductions prior to sale.

The extent of USAID involvement in 1991/92 will depend on several factors, particularly the commitment of the GOL, and the potential profitability of the public corporations. USAID will not make available substantial resources to a privatization effort without clear evidence of strong GOL support.

The USAID assistance strategy calls for a shift in emphasis away from programs funded with and implemented by the GOL toward more programs carried out in collaboration with the private sector in Liberia. This shift is in recognition of the private sector's ability to implement meaningful development programs despite the deteriorating public sector economy.

4124A

² USAID has proposed to earmark 10% of CIP II (Project 669-0215) for this, for program administration, and for other activities directly related to the private sector.

ANNUAL BUDGET SUBMISSION, FY 1992 : PD-ABB-197 LIBERIA IBERIA 1990 ANNUAL BUDGET SUBMISSION (ABS)
